SUMMARY

Software engineer with hands-on React Native / Expo experience shipping production mobile apps end-to-end — from mobile architecture and a fully TypeScript codebase to App Store submission and over-the-air (OTA) updates. Full-stack background delivering fintech-grade, high-availability payment systems at Morgan Stanley and National Bank of Canada. Currently building and operating two live Expo apps backed by Supabase (PostgreSQL), one already in production with real users. High agency, pragmatic, fast-moving, and comfortable owning mobile from zero to production.

TECHNICAL SKILLS

Mobile: React Native, Expo, Expo Application Services (EAS) — Build / Submit / Update, over-the-air (OTA) updates, App Store & Google Play submission, TestFlight, code signing & provisioning

Languages: TypeScript, JavaScript, Python, Java

Frontend: React, Next.js, Angular

Backend & Data: Node.js, Express, Supabase, PostgreSQL, MongoDB, Apollo GraphQL, REST

Cloud & DevOps: AWS, Microsoft Azure, Docker, Kubernetes, CI/CD (Jenkins), Git

Testing: Jest, Cypress, Cucumber — TDD / BDD

PROFESSIONAL EXPERIENCE

Morgan Stanley — *Software Engineer II (Montreal)* August 2023 – March 2026

Stack: TypeScript, Angular 19, Spring Boot, PostgreSQL, Kubernetes, Microsoft Azure, Jenkins

- Built and shipped features for an internal payments and trades dashboard used daily by traders to monitor and handle payments.
- Migrated a legacy C# application to a TypeScript / Angular 19 front end, improving average response time by **40%** for ~100 internal users.
- Refactored and optimized Spring Boot REST APIs and PostgreSQL queries, cutting average latency from **500 ms to 150 ms**.
- Owned end-to-end delivery of new screens from implementation to production within a cross-functional squad.
- Maintained a CI/CD pipeline on Azure + Kubernetes enabling frequent, high-availability releases; applied TDD to achieve very high coverage on critical payment workflows.

Marché Epipresto — *Full-Stack Mobile Developer (React Native / Expo)* September 2022 – December 2022

Stack: Expo (React Native), TypeScript, Apollo GraphQL, Node.js, MongoDB, Stripe

- Developed a cross-platform mobile e-commerce app with **Expo (React Native)** for local grocery and produce stores, publishing **500+** products in 4 months.
- Worked across the full stack in a team of 5, owning both front-end (mobile) and back-end features.
- Migrated the backend from REST to Apollo GraphQL, reducing server round-trips by **20%** and improving average request speed by **40%**.
- Integrated Stripe for secure in-app payments, supporting **100+** active users.

National Bank of Canada — *Back-End Developer Intern* May 2022 – September 2022

Stack: Spring Boot, PostgreSQL, Cucumber, CI/CD

- Designed and optimized **10+** Spring Boot REST APIs for internal payments use cases, used by **50+** financial analysts and internal tools.
- Implemented BDD test suites with Cucumber, reaching **100%** coverage on critical business scenarios and improving release confidence.
- Delivered backlog tasks independently under code-review standards in a regulated environment.

Thales Canada — *Tools Developer Intern* September 2021 – December 2021

Stack: MATLAB, Simulink

- Automated **~80%** of recurring QA tasks for electronic circuits, cutting test execution time from 4 hours to ~30 minutes.
- Built an internal simulation tool that improved calculation accuracy by **~20%**, increasing trust in validation results.

Sentiom Inc. — *IoT Developer Intern* May 2021 – August 2021

Stack: Python, Linux/Bash, Microsoft Azure

- Implemented an MQTT bridge for ~**20** IoT devices, reducing latency and improving real-time sensor-data reliability.
- Built Python scripts streaming events to Azure IoT Hub for centralized monitoring and downstream analytics.

SIDE PROJECTS & MOBILE APPS

Independently building and operating two live mobile products in TypeScript with React Native / Expo and a Supabase (PostgreSQL) backend, 2023 – Present.

Next Leagz — *Founder & Mobile Engineer (React Native · Expo · Supabase)* 2023 – Present

- Building a basketball league-management platform with cutting-edge features; **in production with real users** running the University of Montreal basketball league.
- Own the mobile architecture end-to-end in TypeScript with Expo — EAS Build / Submit / Update, over-the-air (OTA) releases, and the full App Store / Google Play submission and review cycle.
- Designed the Supabase (PostgreSQL) backend with real-time updates, secure multi-role access, and row-level security.

Call Next — *Founder & Mobile Engineer (React Native · Expo · Supabase)* 2023 – Present

- Shipped a **live iOS app to the App Store** for discovering basketball playgrounds, creating pickup sessions, and tracking games in real time.
- Built entirely in TypeScript with React Native / Expo; owned the full store release cycle — code signing / provisioning, TestFlight builds, App Store review — and ship fixes over-the-air via EAS Update.
- Backend on Supabase (PostgreSQL) with authentication, real-time data, and row-level security.
